Have you recently graduated? Or are about to graduate? Want to work for a global semiconductor company with a world-class reputation?

Here at Moortec we are expanding our Digital Design team and are looking for enthusiastic self-starters who are willing to get involved at all levels of the design process. You will get the opportunity to work with an experienced and inspiring team on developing and implementing our world-class in-chip process, voltage and temperature monitors. We specialise in working on advanced nodes at the cutting edge of the semiconductor IP design and our global client base of some of the biggest names in the technology industry reflect our expertise.

Moortec is still growing and expanding at exciting rates and we believe in promoting from within. The skills you'll develop in this role will benefit and prepare you for future career progression alongside the company's growth. Your creativity will be encouraged and your dynamic problem-solving skills for digital design will be nurtured and developed.

We are looking for a talented and capable graduate who has achieved (or on track to achieve) a 2:1 or above. You'll need to have a genuine interest and understanding of ASIC design, be passionate about developing your own expertise and have excellent team working skills.

We're based in a beautiful part of the country in an enviable geographic position looking out on one of the world's largest natural harbours. We're close to some of the UK's best surfing beaches and just minutes from Dartmoor National Park.

We're a friendly bunch who believe that successes should be celebrated and rewarded, so expect to be invited for food, drinks and social gatherings on a regular basis. Since humble beginnings in a small office, working from donated second-hand computers back in 2005, we're proud of our successes and there's a lot to be proud of. If you'd like to join the team and share this pride, we'd love to hear from you.

In return we can offer a generous salary, great perks and benefits and the chance to work for a market-leading company, at the cutting edge of semiconductor design, in Plymouth.
